CEM secures Sur Independent Power Plant, Oman

Oman's largest power plant chooses CEM AC2000 access control and security management system

The industry leading AC2000 security management system has been installed in the Sur Independent Power Plant (IPP), Oman. The system was installed by CEM Approved Reseller Majees Technical Services LLC.

The gas and oil -fired Sur Independent Power Plant (IPP) will be the largest power plant in Oman, representing approximately 30% of Oman's installed power capacity when it is complete later in 2014. The \$1.6bn project owned by Phoenix Power Company SAOC will provide much needed power to meet the growing demand for electricity by employing state of the art technology and introducing high efficiency conversion technology. Sur Independent Power Plant

required a proven, feature rich solution to secure the site.

"Having worked with CEM Systems previously on a number of projects in Oman, we knew the AC2000 system would be the perfect solution for Sur Independent Power Plant" said Sekhar Subramonian, General Manager (F&S Division), Majees Technical Services LLC. He continued "With software applications such as Time and Attendance, AC2000 offers the power plant more than just access control, it offers a way of increasing business efficiency and cost savings".

"CEM works closely with customers to provide a solution which meets their specific needs" said Philip

Verner, Regional Sales Director, EMEA, CEM Systems. "The AC2000 Time and Attendance module provides a user friendly interface which allows the company to monitor and report on employee IN and OUT swipes each day, ensuring staff have completed their daily/ weekly contracted hours. Existing cards and readers can be used for both access control and time and attendance, providing significant project cost savings."

Built with the flexibility to grow as the user requirements change, the AC2000 system has provided Sur Independent Power Plant with virtually unlimited expansion capabilities.

Heathrow Airport Install emerald Intelligent Access Terminal

The industry's most multi-functional touch screen access terminal deployed for controlling access to security critical areas throughout Heathrow airport.

Heathrow Airport, a long standing CEM customer, is now using emerald to control critical paths and restricted zones that are permanently manned by security personnel. emerald provides security staff with a colour image indicating the card status i.e. access denied or access granted. emerald will also enhance security at Heathrow's Campus area where all cargo, staff and crew are processed before gaining access

to the airside area. This is a critical part of Heathrow's security operation where the highest level of security is required.

CEM Systems has been working with Heathrow Airport for over 20 years securing all five terminals with AC2000 Airport; CEM's aviation specific access control and security management system. AC2000 Airport provides Heathrow Airport with a flexible and customisable security solution to meet their unique and growing security requirements.

AC2000 Airport protects staff, aviation equipment such as air

bridges and luggage carousels, and millions of passengers each year. As well as utilising AC2000 software modules such as AC2000 AED (Alarm Event Display), AC2000 T&A (Time & Attendance) and AC2000 VIPPS (Visual Imaging Pass Production System) the airport also has over 4000 readers from the CEM S600 range and a number of S3030 portable readers for airport roaming security.

Adding to the existing range of hardware, emerald is now installed in the Heathrow ID centre and the Campus area.

As an intelligent device emerald goes beyond securing premises; it empowers users, improves overall business performance and increases operational efficiency. emerald is truly revolutionising the security industry, providing a whole new access control experience".

Andrew Fulton, Senior Director of Global Sales

NHS Dumfries and Galloway's Midpark Hospital secured by CEM Systems

AC2000 Lite is the chosen access control system for the £27 million Dumfries Mental Health Unit.

CEM AC2000 Lite access control and security management system has been installed in Midpark Hospital, Scotland. The system was installed by CEM Approved Reseller Scotshield Fire & Security.

"AC2000 Lite is a feature rich, cost effective access control and security management system and fulfills the needs of Midpark Hospital perfectly" said Michael MacBean, Business Development

Director, Scotshield Fire & Security. "The site required a highly secure, resilient system with a degree of flexibility to suit evolving needs".

Midpark Hospital replaces the accommodation previously provided by Crichton Royal Hospital and provides a modern, stable and secure environment for patients requiring specialist care. The NHS reports Midpark is one of the most innovative mental health hospitals

in the UK and offers a variety of therapeutic interventions.

"Should Midpark Hospital's needs grow, AC2000 Lite can be seamlessly updated to the core AC2000 security management system" said Philip Verner, Regional Sales Director EMEA, CEM Systems. He continued "This provides an upgrade path with virtually unlimited expansion capabilities which future proofs the system".

EMEA Business Partner of the Year winners receive their awards (left to right) - Mark McAteer (ADT Fire & Security), Craig Menzies (Tyco Fire & Security UAE LLC), Philip Verner (CEM Systems), Brendon Hall (Pentagon), Godfrey Obinabo (Geoffield) and Janusz Grabara (Samaxon)

APAC Business Partner of the Year winners receive their awards (left to right) – Chris Lee (ADT Hong Kong), Albert Chang (Yi Dai Tian Cheng), Jason Tan (Tyco Security Products), Andrew Fulton (CEM Systems) and R. Vejian Rajandran (Twice Technologies)

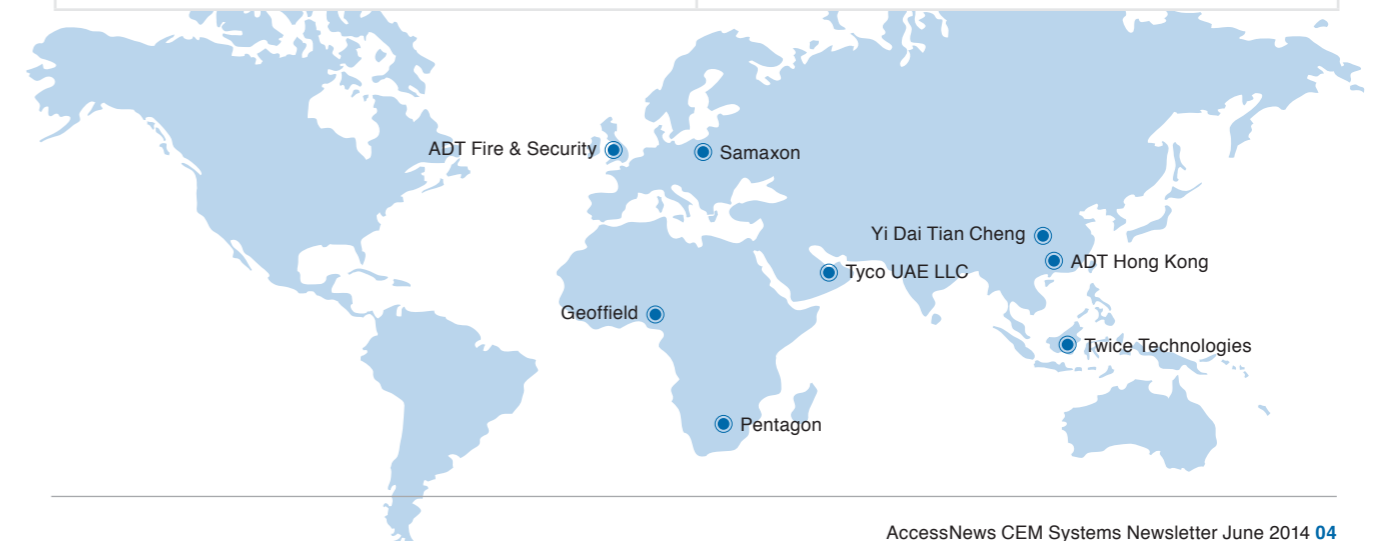

CEM Business Partner of the Year Awards 2014

CEM has announced the winners of the CEM Business Partner of the Year 2014 awards. The awards are a chance for CEM to recognise the efforts of their most successful, motivated, knowledgeable and

committed CEM Business Partners around the world. This year, the awards have been split into regions with awards for best in class throughout EMEA & APAC and special recognition for a high

performing sales person in the APAC region and also for an active and committed installer in the EMEA region.

EMEA Winners	APAC Winners
UK & Ireland: ADT Fire & Security	Hong Kong: ADT Hong Kong
Europe: Samaxon	South East Asia: Twice Technologies
Middle East: Tyco Fire & Security UAE LLC	China: Yi Dai Tian Cheng
Africa: Pentagon	APAC (Special Recognition): Jason Tan
Africa (Special Recognition): Geoffield	

CEM Systems provide flexible and reliable security for Distribution Center 24

CEM provide AC2000 integrated access control, Visitor Management and ID Badging

The industry leading AC2000 Lite access control system has been selected to secure the offices of the Distribution Center 24, Belarus. The system was installed by CEM Approved Reseller, Unibelus Ltd.

Distribution Center 24 required a proven and reliable security solution which was streamlined and flexible enough to use across their site while still providing the highest levels of security. "AC2000 Lite is currently the best solution in terms of quality and reliability for medium sized sites. This made it the obvious choice for Distribution Center 24" said Denis Markovnik,

product manager for access control systems, Unibelus Ltd.

The AC2000 Lite system at Distribution Center 24 secures over 40 critical access points throughout the facility. The use of the CEM eDCM 300 (Ethernet Door Control Module) brings intelligence right to the edge of the system using Ethernet communications. The device provides full off-line validation and decision making capability at the point of entry, even when host communication is lost. The eDCM 300 is also used in conjunction with third party readers to control car park barriers, staff turnstiles and electric door strikes throughout the facility.

"The system installed at Distribution Center 24 showcases how CEM's AC2000 Lite can provide leading edge access control without hindering the flow of people and vehicles at a site, while enhancing operations on site and contributing to the smooth running of the facility" said Philip Verner, Director of Sales, EMEA, CEM Systems.

Distribution Center 24 has deployed workstations at each of the guard stations around the facility. This means that guards have access to real time information about the AC2000 system, allowing staff and visitors to feel secure at all times.

CEM Conference 2014

In April and May, key CEM customers, dealers and industry experts gathered from around the world for the annual CEM EMEA and APAC Conferences held in Belfast, UK and Phuket, Thailand respectively.

The annual CEM Conferences provide an opportunity for CEM business partners to learn about the latest advances in CEM software and hardware solutions.

Delegates received updates on security industry trends and advice on how to address the latest security threats. Through customer feedback sessions,

business partners were also given the opportunity to provide their thoughts on how CEM's product range could further enhance security and business operations in future.
