

S610e Reader

PicoPass Intelligent IP Reader

Features that make a difference:

- Intelligent IP card reader designed for use as part of the CEM AC2000 access control software range
- Contactless card presentation with the option to enable Personnel Identification Number (PIN) for two stage authentication
- Integral reading support 13.56 MHz PicoPass smartcard technology
- Communicates directly with the host server no need for an intelligent control panel in the system design
- 10/100 Mbps Ethernet host connection
- Large reader database for off-line card verification and alarms
- Large graphical LCD which is used to display a number of predefined messages
- Four Analogue inputs to monitor door or alarm conditions
- Two changeover relay outputs to activate door strike or other equipment
- Remote programming facility to download updated firmware
- Easy to install
- Weatherproof casing: IP66 rated
- Available in grey and black

The S610e Card Reader is designed for use as part of an integrated on-line access control system and is used to control access to restricted areas or in special applications where card activation of machinery is required.

The reader, which has an on-board 10/100Mbps Ethernet connection, communicates directly with the CEM AC2000 host server removing the need for an intelligent control panel in the system design.

Using a powerful 32bit processor, the S610e gives full off-line card verification and decision making at the point of entry, even when host communication is not available.

Exit reader options include a twinned S610 Exit reader, Push button or a third party Wiegand Exit read head for IN/OUT control.

The IP66 rated polycarbonate enclosure houses the reader electronics and comes with a large 4x3 keypad, graphical display screen and three LED indicators.

The S610e reader has four analogue inputs, which can be used to monitor door and alarm conditions for transmission to the host server. All four inputs are four state (tamper detect) capable. Two outputs are also fitted to control the activation of door locks or other equipment.

Host Communications

The S610e has an on-board 10/100 Mbps Ethernet host connection allowing it to communicate directly with the AC2000 host server, removing the need for an intelligent control panel in the system design.

Onboard Card Reading Technologies

Designed for use with 13.56 MHz PicoPass smartcard technology. Two additional Wiegand interfaces are available for connecting third party readers.

Off-line Operation

A full off-line database is downloaded to the reader from the host server with subsequent changes to card data automatically sent as updates. This ensures the reader has up-to-date card information when operating in offline mode. Alarms and transactions recorded in off-line mode are passed automatically to the AC2000 system when reader communications are re-established.

Reader Messages

The S610e has a large graphical LCD which is used to display a number of predefined messages to cardholders depending on their privileges e.g. Wrong Zone, Lost/Stolen Card, Card About to Expire, Access Granted and many more. Messages displayed by the S610e can be modified via the AC2000 software.

Easy to Install

The S610e is designed to be extremely easy to install. The installer simply enters the unit IP address on the AC2000 workstation, provides it with power, connects to an Ethernet network and the reader self-configures by means of downloading data from the host.

Specification

Physical

Size 142 x 115 x 44 mm (5.6 x 4.5 x 1.7 inch)
 Weight 370 g (13 oz) with connectors
 Housing Flame retardant polycarbonate containing fully encapsulated electronics.
 Colour options Dark and Light Grey or Black

Power Requirements

Voltage 9 – 14 Vdc
 Current Consumption 290Ma Passive, 360Ma Active

Environmental

IP Rating IP66
 Temperature -20°C to 60°C (-4°F to 140°F)
 LED Indicators Three high intensity LED indicators, Red, Amber and Green
 LCD Indicators 32 x 122 dots Monochrome Graphics LCD with backlight
 Keypad 12 character, standard layout, tactile response keypad

Functionality

Inputs Four analogue inputs – voltage supplied, 4 state (tamper detect)
 Outputs Two relay fitted – changeover volt free contacts
 Rating 30 Vdc @ 5A
 Duration Programmable suppression device (diode, MOV) required at load
 Memory 2 MB battery backed memory
 Database battery backup 3.0 V rechargeable Lithium-Ion

Remote Programming

The S610e reader can be remotely programmed from the host computer, eliminating the need to physically replace the firmware, giving increased system flexibility and efficiency. Some configuration setting can be set using the keypad and operational parameters, e.g. door open time, can also be downloaded to the reader. Standard Operating Modes include, but are not limited to, Door Access, Passenger (extended opening time), Turnstile, Verification, Control Post, and Equipment Enable mode.

Dynamic Database Sizes

In Offline Operation	8 Byte Mode (Card number, Timezone, PIN, Card Status)	
	Card holders	Transactions
	210,000	10,000
	150,000	50,000
	80,000	100,000
	3 Byte Mode (Card Number Only)	
	Card holders	Transactions
	430,000	10,000
	310,000	50,000
	160,000	100,000

Communication Interface

To Exit Reader RS-485
 Interfaces Two Wiegand interfaces with a maximum cable length of 150M
 Connection 2 part JST connector
 To system Host 10/100 base-T TCP/IP using CAT5 Unshielded twisted pair cable
 Connection RJ45

Requirements

- AC2000 Airport
- RTC Ethernet Reader Controller

Ordering Information

Product Codes	Description
Grey Version	
RDR/610/106	S610e 13.56MHz PicoPass
Black Version	
RDR/610/116	S610e 13.56MHz PicoPass
