Data Sheet

S9032 Lift Controller Floor access control for up to two elevators

Key Features

- Intelligent embedded network device for control of lift cabs with the CEM AC2000 system
- Utilises Lift Interface Units for physical control of floor selection panels and buttons
- Supports two lift cabs with up to 128 floors per lift
- 128MB compact flash for database with expansion available
- Storage capacity for up to 250,000 card records
- Full TCP/IP based diagnostics/ monitoring available via web browser or Telnet
- Cabinet Tamper, AC Power
 Fail, Low battery (when fitted)

The S9032 Lift Controller is designed to be an integral component of the AC2000 integrated security management system. It is designed to offer the ability to control the floor access of either one or two lift cabs, each of which can support access to up to 128 floors.

Using the S9032 Lift Controller and constituent devices the AC2000 system can provide access control to specific lift floors within a building. From a cardholders perspective it is as simple as them entering a lift cab, presenting their card to a CEM access control reader, which in conjunction with the S9032 Lift Controller carries out access checks on the AC2000 database to determine which floors the cardholder is allowed access to. This information is then presented to the lift via a Lift Control Interface series of relays, used to enable the floor selection buttons in the cab.

The cardholder can then select an enabled floor and the lift cab will proceed as normal. Depending on the lift specification the S9032 Lift Controller can also record which floor selection the cardholder requested, allowing reports to be generated at a later date.

The S9032 Lift Controller provides full 10/100 Base-T Ethernet connectivity, allowing the administrators to use both Telnet and web-based user interfaces to remotely monitor the controller at any time.

Onboard Database

The S9032 Lift Controller supports its own database of up to 200,000 card records, depending on the record format and the memory fitted. The records include card numbers, access level and time zone details. The database allows the controller to validate card requests from the lift cab readers even when communications with the AC2000 system have been lost. Card transactions, floor selections and alarms are stored until communications are restored at which point they are uploaded to AC2000 ensuring no access control event is ever lost.

Offline operation

Lift Control Interface

Connection between the S9032 Lift Controller and a lift is accomplished via a Lift Control Interface (LCI) containing one or more sets of input/output modules. Various LCI options are available to support up to 128 floors. Output modules are used to signal to the lift which floor selection buttons to enable. Each output module provides 16 dry contacts, with one being used per available lift floor. Input modules provide 16 analog inputs. Inputs are included to provide a mechanism for the lift to signal back when floor selection has been made and which floor was selected. Again one input is used per monitored lift floor.

It is recommended to contact a CEM sales representative to discuss your specific requirements before ordering any Lift Control Modules.

The interface between the system and the lift hardware depends considerably upon the lift manufacturer, model, and the specific requirements on site. It is important that the integrator communicates closely with CEM Systems prior to placing an order to determine the precise installation requirements, which may vary greatly between installations.

C	n	~: 6	~~~	÷i	~	~~
S	peo	-111	Cd	u	OI	15

Physical	
Size	42 x 483 x 233mm (1U x 19" x 9.2")
Weight	2.6Kg
Housing	19" rackmounted steel enclosure
Colour	Beige
Power	
Voltage	Mains power adapter 100–240Vac (supplied) Output voltage 12Vdc @ 2.0A
Current Consumption	300mA
Backup Battery	Internal Lithium Ion battery giving a minimum of three hours backup time. Power fail reported to system internally.
Environmental	
Temperature	-10° to 50°C (14° to 122°F)
Humidity	95% non condensing
LED Indicators	Online/Offline, Ethernet connection, Activity/ Status, Power and Heartbeat
Functionality	
Inputs	Dedicated Tamper Input
	Dedicated Power Fail Input
Reader capacity	Two Optically isolated RS485 multidropped reader networks, each supporting up to 16 doors (32 readers IN/OUT per port)
	10MB of RAM
Memory	28kB Boot Loader ROM
Memory	128MB Compact Flash Disk
	Storage of up to 200,000 cards per controller, with four access levels and time zone definition
Database Cardholders	pairs per cardholder record.
Transactions	Up to 200,000 transactions in offline operation, depending on amount of cardholders stored.
	Custom-made Web Browser GUI available for displaying controller status and configuration as
Configuration	well as alarm and transaction displaying. A Telnet client can also be used for remote
0	diagnostics.
Communication Interface	
	RS485 multidrop cable runs using copper wire with maximum length of 1.2km without repeater
To Card Reader Connection	RJ45
To System Connection	Host Ethernet 10/100 BaseTHost Connection RJ45

Ordering Information

Product Code	Description
DAC/390/L32	S9032 Lift Controller (up to two lifts)

Requirements

- AC2000
- AC2000 Airport
- AC2000 Lite Server bundle*
- * Not supported in AC2000 Lite Software-only Virtual Kit

Additional Equipment Required

One IOC LCI unit is required for each lift car connected to the S9032LC unit. If the S9032LC is to control access requests in two lift cars, then two OIC LCI units will be needed. Allow for a card reader in each lift car also.

Product Code	Description
IOC/000/008B	Lift Control Interface Type 2B, suitable for up to 16 floors. For use with CEM sDCM 350 and sPass reader.
IOC/000/008	Lift Control Interface Type 2 (up to 16 floors)
IOC/000/009	Lift Control Interface Type 3 (up to 32 floors)

For more than 32 floors to be controlled contact CEM Systems for details. Card reading device required for each lift cab.

About Johnson Controls

Johnson Controls is a global diversified technology and multi-industrial leader serving a wide range of customers in more than 150 countries. Our 120,000 employees create intelligent buildings, efficient energy solutions, integrated infrastructure and next generation transportation systems that work seamlessly together to deliver on the promise of smart cities and communities. Our commitment to sustainability dates back to our roots in 1885, with the invention of the first electric room thermostat.
